CHAPTER 1

IceWarp Notifier User Guide

IceWarp Notifier is a WebClient integration and new email notification utility, for Windows 98, 2000, XP, Vista and W7.

The main purpose is to allow integration of IceWarp WebClient as the default Windows e-mail client for handling **mailto:** hyperlinks, or as a system tray shortcut to message composer. No longer users need to launch their browsers, navigate to the WebClient addresses, log in and click **New Message** and then paste e-mail addresses through clipboard – Notifier makes it possible with just a single click.

With Notifier installed, clicking a *mailto:* link will open WebClient message composer and supply the subject, recipient's email address or SMS number.

Notifier also informs on new email instantly as items arrive, displaying a notification bubble with e-mail preview and/or playing a custom sound, and shows unread message count when you hover the mouse over its icon.

Automatic features make it easily accessible for users:

- Easy installation through installer wizard
- SmartDiscover support (zero configuration, just type username and password)
- Automatic timezone adjustment to system timezone
- Locale AutoDetect (language selected automatically based on Windows locale settings)
- Auto SSL (whenever available)
- Auto start on system startup

Other features include:

- Mailto: and default mail client handling
- IMAP IDLE instant e-mail notification and continuous item display
- CRAM-MD5 authentication
- Systray icon unread message indication
- Fading window with e-mail preview
- Browsing in emails using key arrows, Home and End
- Custom or Windows sound new e-mail notification
- Opens the default browser or another specified in Settings
- Unicode or regional charset support
- Localization support (various language translations available)
- Uses INTERNALDATE (no notifications on forged Date: header)
- Command line parameters, see /help for information
- --help, --runmail, --mailto, --register and --unregister parameters

IceWarp Notifier installation is complete now.

Settings

To configure IceWarp Notifier, follow these steps:

1. On the right side of the computer **task bar**, right-click the icon shown below and select the **Options** item:

For more details about the pop-up menu shown above, refer to the Pop-up Menu (on page 9) section.

2. On the General tab, define your IceWarp Notifier preferences:

🗟 lceWarp No	otifier v1.34

💿 View Inbox	O Options	O Show
Mouse Ctrl+Dou	ble Click	
🔿 View Inbox	Options	O Show
		OK Cancel

Field	Description
Make WebClient the default program for e- mail	Tick the box if you want to set WebClient as the default email client in Windows.

8 IceWarp Notifier User Guide

Automatically run when you start your computer	Tick the box if you want the system to launch Notifier automatically after Windows startup.
Notification	 Select how/if you want to be notified when a new email message arrives: Show unread messages & play sound Show unread messages None
Browser	Select the default browser for WebClient from the list or click the Browse button to use the Browse for file dialog to select your favorite browser.

Other settings are optional.

- 1. On the User Details tab, fill in your *Email* address and *Password* to your email account. Leave the rest blank. Click *OK*.
- 2. Notifier will now try to automatically configure the server using the SmartDiscover feature, if it has been enabled by the server administrator. If you do not see a notification window with e-mails from your **Inbox**, you need to configure Notifier manually.
- 3. Reopen the Settings User Details tab.

Into the URL field, provide the correct web address where you usually access WebClient.

Into the *Server* field, type the server hostname you received from your administrator – usually it is the first (hostname) part between slashes of the WebClient URL – see the picture below.

🖹 lceW	arp	Notifier	r v1.34 🛛 🗙

<u></u>				1
			OK Cancel)

4. Click **OK** to finish setting up IceWarp Notifier and save the changes.

Notifications

When a new email message arrives, a notification similar to this one is shown:

Clicking this notification frame opens a window with the incoming message directly in WebClient.

You can use arrow keys, Home and End keys to browse through e-mails in your Inbox within the notification frame.

Pop-up Menu

To reveal this menu, right-click the Notifier task-bar icon as illustrated in the **Settings** (on page 6) chapter – on the first image with an arrow.
